

MAGISNAT
The science behind the natural molecules and the Mediterranean diet

GARLIVE PRODUCTS

Development and commercialization of
Garlive Dietary Supplements

Since 1879, Bertelli uses extracts from typical plants of the Mediterranean diet"

ABOUT US

Our History

Our company was created **15 years ago** in **Italy** by **Matteo Bertelli**, MD, PhD, as a university spin-off company, with the goal to carry out **research on the Mediterranean diet**.

The formation of the company was inspired by **an historical figure** of the last century, **Achille Bertelli**, who moved to San Francisco in order to develop his chemical-pharmaceutical company and became an expert in the field, later **specializing in extracting natural molecules and producing tablets**.

Our Mission

From Italy to the United States, **our mission** is to **research natural molecules in the foods** that compose the renowned **Mediterranean diet**, one of the most famous UNESCO intangible heritages.

This diet, rich in olive oil and Mediterranean fruits and vegetables, **is high in polyphenols** while providing **a low and balanced caloric** intake.

The **scientific research** carried out in our center aims at **identifying and experimenting** with the **beneficial substances in typical foods** of the **Mediterranean Diet**, with the **purpose of recommending their inclusion** in a **program** designed for **optimal health** or **restoring the physiological balance of the organism**.

We apply **omics approaches**, such as molecular genetics and metabolomics, to study natural substances extracted from typical foods of the Mediterranean diet, which **have shown marked beneficial effects on the human body**, and to **offer them** to those who **want to rebalance their diet based on scientific evidence**.

Our Vision

We believe in Commitment, Innovation and Quality in the **production of safe and useful dietary supplements**.

Our goal is to **spread knowledge** about the **Mediterranean diet** and a **healthy lifestyle** and to **promote the selling of dietary supplements**, among whose main compounds are the natural molecules that are typically contained in the plants used in the Mediterranean diet.

The **branch of our company** that will **sell our products in America** will be **MAGISNAT**, at the following link: www.magisnat.com.

WHAT WE OFFER

MAGISNAT* develops activities aimed at **promoting healthy and sustainable lifestyles**, similar to the **Mediterranean diet model**.

The **philosophy** of the **Mediterranean diet lifestyle** can **help individuals** to **respect healthy patterns**.

MAGISNAT, in particular:

Organizes courses on the **Mediterranean Diet lifestyle****;

Conducts research through **genomics, microbiomic** and **metabolomic approaches** dedicated to **studying the causes of eating disorders** (anorexia, bulimia, binge eating), **obesity, lipoedema, primary lymphedema** and **other nutritional deficiencies**;

Develops and sells dietary supplements containing **high-dose natural molecules** with **beneficial effects** found in typical plants of the Mediterranean diet**;

Offers directly to the consumer **genetic, metabolic, microbiomic tests** exclusively for **personal research interest****.

*MAGISNAT is currently a project of the Italian Company MAGI's Lab Srl

** Not for diagnostic or therapeutic use

MORE INFO

Company Certification

Our consultant on the regulatory and advertising aspects of dietary supplements is Export USA New York Corp.

Our company's FDA Registration – Our company commits to guaranteeing each and every legal, safety and quality aspect of our dietary supplements.

Typically, a US agent will help in the event of an emergency related to a dietary supplement.

In case of an emergency, the FDA contacts the US Agent and no other personnel. By law, the US Agent must have a residence in the US and be physically present in the US. Our FDA Agent is Export US New York Corp.

The cornerstones of our company are transparency, traceability from the raw materials to the final products, safety of our products, and scientific evidence of their functions.

This is why we reinvest in scientific research on our dietary supplements.

For these reasons our company joined the Council for Responsible Nutrition (CRN).

Our company fully embraces CRN's Code of Ethics. Our dietary supplements can be found on CRN's registry.
